Cabintop teak handrails on the P-385 are fastened through the deck with 10-32 x 5" long machine screws. If you ever try to find replacements- try these guys. These were the ONLY folks who could supply them and they are the manufacturers. Seems that a 10-32 machine screw in stainless can only be made in lengths up to 3" long unless you have special equipment. (Material is too soft).

I purchased 50 pieces for \$2.09 ea on 3/13/01.

Their part number pfmsss10f80, 10-32 X 5 PH FL 188.
